Amendments to the Claims

- 1. (Original) A method for sharing network access capacities between a master service provider, comprising at least one point of presence, and a client service provider, said method comprising the steps of:
 - upon reception of an access request, including at least a subscriber identifier, a service provider identifier and a password, at said at least one point of presence:
 - determining, according to said service provider identifier, if said access request comes from a subscriber of said master service provider or from a subscriber of said client service provider, said access request being rejected otherwise:
 - if said access request comes from a subscriber of said master service provider,
 - determining, using said subscriber identifier and said password, if said subscriber is authorized to establish a connection; and.
 - if said subscriber is authorized, establishing a connection, else, rejecting said access request;
 - else, if said access request comes from a subscriber of said client service provider,
 - determining if a new connection may be established for a subscriber of said client service provider; and,
 - if a new connection may be established, sending an authorization request, comprising at least said subscriber identifier and said password, to said client service provider, else, rejecting said access request;
 - upon reception of an authorization acknowledgment, comprising said subscriber identifier, from said client service provider:

- if said subscriber is authorized, establishing a connection
- else, rejecting said access request.
- 2. (Original) The method according to claim 1 further comprising the step of replacing said subscriber identifier and said password by a virtual subscriber identifier and a virtual password, associated to said service provider identifier, when said access request comes from a subscriber of said client service provider, before determining if a new connection may be established for a subscriber of said client service provider.
- (Original) The method of claim 1 further comprising the step of determining a duration of the connections established by subscribers of said client service provider.
- 4. (Original) The method of claim 1 further comprising the step of determining a number of simultaneous connections established by subscribers of said client service provider.
- 5. (Original) The method of claim 1 wherein said step of determining if a new connection may be established for a subscriber of said client service provider is based upon a number of ports allocated to said client service provider.
- 6. (Original) The method of claim 1 wherein said step of determining if a new connection may be established for a subscriber of said client service provider is based upon a connection time threshold associated with said client service provider.
- (Original) The method of claim 1 implemented in a RADIUS proxy, using RADIUS protocol.

- 8. (Original) The method of claim 1 wherein said service provider identifier is a realm.
- 9. (Original) An apparatus comprising means adapted for carrying out the method according to claim 1.
- 10.(Cancelled).
